FIBEROPTIC COIL TRAY AND CARRIER PACKAGE

ABSTRACT OF THE DISCLOSURE

A fiberoptic cable coil tray and coil carrier package comprises a carrier to which the fiberoptic coil is attached and which is inserted into the tray, and a lid for the tray. A plurality of fiberoptic coil retainers in the form of notches or clips are 5 formed on the coil carrier to provide a stable, self-contained and restrained fiberoptic coil which remains properly seated in the package during handling and storage. The coil carrier provides increased ease of handling of the fiberoptic coil by restraining individual fiberoptic coils with the plurality of coil retainers which are positioned along the length of the fiberoptic cable, such that a selected length of the fiberoptic 10 cable can be removed from the carrier without the remaining coils springing out therefrom. The carrier also secures each end of the fiberoptic cable, such that either end can be removed separately while the remainder of the fiberoptic coils remain secured to the carrier.
